Objective

2025 Computer Science Engineering fresher and enthusiastic **Backend Java Developer** skilled in **Java, Spring Boot** and **SQL**. Hands-on experience in developing scalable microservices, **RESTful APIs**, and cloud deployments using **AWS** and **Docker**. Proven ability to deliver production-ready systems during internships at **Bluestocks Fintech**, **IBM**, and **Gleam-AI**. Passionate about backend architecture, API optimization, and building efficient full-stack solutions.

Education

HKBK College of Engineering, Visvesvaraya Technological University (VTU)
Bachelor of Engineering in Computer Science
GPA: 8.5/10

Bengaluru, Karnataka
May 2021 - July 2025

Technical Skills

- Languages: Java, SQL
- Frameworks: Spring Boot, Hibernate, AngularJS
- Databases: PostgreSQL, JDBC, Redis
- Cloud/DevOps: AWS (S3, EC2), Docker, Git, Bitbucket
- Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms
- Soft Skills: Communication, Problem-Solving, Teamwork, Adaptability

Professional Experience

Software developer Intern, Gleam-ai

May 2025 – Present | Bengaluru

- Engineered a modular backend system using **Java, Spring Boot**, and AngularJS, supporting automated data scraping, storage, and **RESTful APIs**.
- Integrated **AWS S3** for scalable file storage and **PostgreSQL** for persistent data management.
- Improved deployment efficiency by 30% through CI/CD setup and collaborative workflows in Bitbucket and Jira.

Software Development Engineer Intern, BlueStocks Fintech

April 2025 – Jun 2025 | Remote

- Designed transaction APIs in Spring Boot for fintech use cases, empowering 1K+ active users to process payments securely.
- Enhanced response time of API through optimization of database queries and middleware processing.

Cloud Application Developer Intern, Rooman Technologies

Nov 2024– Mar 2025 | Bengaluru

- Developed real-time and batch processing pipelines leveraging Apache Spark (MLlib) in IBM Watson Studio.
- Deployed solutions on IBM Cloud, utilizing cloud storage and error-handling mechanisms to provide scalability and reliability.

University Projects

Gaming tournament platform:

[GitHub Repo Link](#)

- Built an end-to-end tournament management system handling 1000+ concurrent users with automated bracket generation, payment processing, and real-time notifications.(Java, SpringBoot, Redis, Docker, Swagger, PostgreSQL).
- Implemented resilience patterns (circuit breakers, retries) for third-party APIs, Redis caching for performance optimization.

Real-Time Chat Application:

[GitHub Repo Link](#)

- Developed using Spring Boot (Java) with microservices architecture and WebSockets.
- Containerized with Docker & Docker Compose for scalability; version-controlled with GitHub.

Certifications & Publications

- Getting Started with Competitive Programming – Swayam NPTEL
- Programming in Java – Swayam NPTEL
- Database Management System – Swayam NPTEL
- Spring and Hibernate, including Spring Boot – Udemy
- Publications: Performance Analysis on Food Supply Chain Using Blockchain Technology, IEEE
